NEW/IMPROVED LOW MAINTENANCE BATTERIES P/N's 65991-82A and 66010-82A

We are pleased to announce the addition of these NEW/IMPROVED Low Maintenance Batteries to our Replacement Parts product line.

These new batteries contain a special chemical formula that drastically reduces sulfate crystal build-up on the battery plates.

Testing in our electrical laboratories found that low maintenance batteries not containing this chemical, when left sitting in a fully discharged state for approximately 30 days, would not accept a charge while those with the chemical accepted a charge and recovered up to 95% of capacity.

Like all Genuine batteries we offer, the case on this new battery is made of strong, impact resistant polypropylene plastic and is 100% "water tested" for leaks. Also, the terminals are "resin coated" prior to being mated with the cover, a process which greatly reduces acid leaks, especially after the battery has been in service for an extended period of time.

This new Genuine battery is part of Harley-Davidson's on-going commitment to give our customers products that incorporate the latest technologies for better performance and longer life.

These new batteries take the place of 65991-82 and 66010-82, and are on the "mix table", priced as follows:

<u>Part Number</u>	<u>Model Application</u>	<u>Dealer Net</u>	<u>Suggested List</u>
65991-82A	FX, FXR, XL	38.45 (1-5)	60.95
		37.45 (6-11)	
		36.45 (12-up)	
66010-82A	FLT, FLHT	44.45 (1-5)	70.95
		43.45 (6-11)	
		42.45 (12-up)
