PAB #368

OIL CONTROL CYLINDERS AND PISTON ASSYS P/N 16508-81 FRONT - P/N 16509-81 REAR

These kits were used to service late 1981-1982 1340's with oil control cylinders and tappet guides (an oil line from the tappet guide to the cylinder base was used to scavenge oil from the tappet guide). These kits include a cylinder w/piston assy. and a tappet guide modification kit to eliminate this scavenge line, which is not needed.

In the interest of consolidating inventory at the dealer and factory levels, we have obsoleted kits 16508-81 and 16509-81. In their place you may order the individual components.

16498-80A Front Cylinder and Piston Assy.

16499-80A Rear Cylinder and Piston Assy.

16176-81 Tappet Guide and Cylinder Modification Kit (one required per cylinder)

Thank you
