PAB #440

1990 BIG TWIN CLUTCH APPLICATION

Friction plates made from cork material are used on vehicles that undergo everyday routine operation with normal stopping and starting conditions. These cork friction plates must be used with the correct steel plates having a textured surface finish.

Friction plates made from paper material are used on vehicles that undergo frequent engagement and disengagement conditions such as may be experienced during parade or escort service. These paper friction plates must be used with the correct steel plates that have a smooth surface finish. They are not intended for high performance applications.

All friction plates should be replaced in complete sets or kits.
