## SPORTSTER RETROFIT OIL TANK KITS

- Part Number 62482-93 (1982 - early 1987 XL models with flared brake lines)
- Part Number 62472-93 (late 1987 - 1993 XL models with banjo brake lines)

Two retrofit oil tank kits for 1982 to 1993 Sportster models (except XR-1000) will be available in late October to early November of this year. The kits will incorporate the 1994-style XLH oil tank and will include all the components required for retrofitting, along with detailed installation instructions.

When our inventory of all earlier oil tanks (62475-81A and 62475-83) is depleted, we will no longer supply early-style oil tanks. Instead, you will need to order the appropriate oil tank retrofit kit based upon the model year and the brake line fitting style of the particular Sportster. The part numbers for the two retrofit kits are shown above.

Please note that the retrofit oil tank part numbers/model applications referenced in *Technical Tips #34* of July 1993 were incorrect. Please correct your copy of that publication for future reference.
