2020-05-15

INTERNATIONAL FITMENT: THE BOOM! BOX GTS SOFTWARE UPDATE

Purpose for Parts and Accessories Bulletin

To notify International dealers that International GTS radios are now available to be ordered and installed in 2014-2018 Touring, CVO Touring and Trike models previously equipped with 6.5 GT radios as retrofittable with additional parts and software as noted.

Markets Affected

Only international markets are affected.

Change Coming

GTS radios with the revised part numbers are capable of being installed on 2014-2020 vehicles. Refer to Table 1 for instructions covering the required parts.

Installing the radios on 2014-2018 vehicles will require the purchase of an upgraded Universal Serial Bus (USB) cable due to the higher data rate transfer requirements. If standard antenna is installed, a new Digital Audio Broadcast (DAB) antenna will be required (shorty or hidden antennas will continue to work). The software version on the radio will be MY20.19.39.00 or newer.

				XM Module (optional):	X-60M

Genuine Harley-Davidson vs. Aftermarket

The Boom! Box GTS radio is a feature-rich motorcycle infotainment hub. In addition to delivering music, the GTS communicates with the bike and informs the rider with navigation details, provides engine and fuel information, displays Tire Pressure Monitoring System (TPMS), and provides ride summary specifics such as average speed, distance traveled, fuel used/stops.

Another benefit is the level of integration. No other competitive unit is more integrated with the bike and tested with the same rigor as the original equipment Boom! Box GTS radio.

When the Boom! Box GTS replaces the existing radio it is not simply a screen update but rather a complete Infotainment computer refresh.

Questions

Contact Technical Service with any concerns regarding application. Direct all other questions to the Dealer Services Representative.
